Bolt-on site features and SEO.

May 01, 2010
Word Count: 1468

TEXT:

...Value for page volume: When a new feature will increase the number and types of pages created, make sure that those pages will have valuable **keyword** targets for SEO.

Value for word volume: Plan for add-on features to increase the occurrence of valuable keywords, not just the number words. Increasing the number of words without increasing valuable keywords diffuses the overall **keyword** theme of a page.

Crawlability: If a site feature can't be crawled without the use of cookies, JavaScript, CSS or iframes, it's possible...

...A must-have for large e-commerce sites, faceted navigation technologies like those offered by Endeca and Mercado are critical to usability. When applied using **keyword** research and keyphrase patterning, they can also be most beneficial to SEO.

Faceted navigation allows access to a structured set of predefined internal search results...

...filters can be staggering, reaching into the millions of pages. Take care to limit the crawlable content to filters based on valuable keywords.

For example, **keyword** research and pattern analysis for the athletic shoe site (above) will show that gender and sport are highly valuable filters, while price is not a highly searched-upon **keyword** element. This is valuable information in determining both the order of elements in URLs and the content to suppress for search engines.

Assuming the URLs...

...H1 heading, body copy and internal links.

What's more, don't create a tag cloud or popular search page to compete for the same **keyword** target as an existing crawlable, optimizable category or subcategory page. Why create a duplicate page when you can link to the already stronger incumbent page...

...but some still tout the benefit of a reviews subdomain.

Cross-selling and personalized recommendations

Cross-selling tools like "related products" boxes may strengthen the **keyword** theme on product pages. Because they tend to feature products with similar names or features, they may improve **keyword** visibility on the page the box is placed - as well as strengthen internal linking for the products being linked to.

The same theory holds true...

...on a customer's page views or purchase history. But the reality is often different for SEO benefit.

PROS FOR SEO: Related products can strengthen **keyword** themes when product names contain valuable keywords.

CAUTIONS FOR SEO: Many related-products technologies are fed in via JavaScript or iframes, and personalized recommendations require...

...about which bolt-on features are beneficial to SEO and under what circumstances. Strive for implementations that create crawlable content that supports a page's **keyword** theme rather than diffusing it, creating competing pages or creating masses of low-SEO-value pages.
